Project Design Phase-I
Proposed Solution Template

Date	19 September 2022
Team ID	PNT2022TMID35181
Project Name	University Admit Eligibility Predictor
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in Proposed Solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Education plays a vital role in a student's life. There are two main concerns that a student faces while applying for colleges. One, the concern of getting into the dream colleges. Two, money. Not everyone can afford to apply to all the colleges possible, some need to pick a few and apply to only those. These are the problems that need to be solved. The University Eligibility predictor aims to help reduce these issues.
2.	Idea / Solution description	The idea is too use factors like IELTs score, GRE score, GPA, SoPs, recommendation letters etc to help accurately determine the possibility of a student getting into their dream universities
3.	Novelty / Uniqueness	High accuracy. There are very few eligibility predictors that can accurately predict the universities that a student is eligible for
4.	Social Impact / Customer Satisfaction	Students can use this to help filter the colleges that they need to apply to based on the criteria. The stress of researching and figuring out the colleges that the student is eligible for will be reduced and thus they'll be able to make better, more calm decisions.
5.	Business Model (Revenue Model)	It could be an Advertisment-based revenue model or a subscription-based revenue model
6.	Scalability of the Solution	Universities can be encouraged to maintain a database of students' eligibility. This would in turn help the application make better predictions.
